National Cancer Institute Dietary Assessment Primer Now Available

The National Cancer Institute (NCI) is pleased to announce the availability of a web-based Dietary Assessment Primer. Various types of self-report instruments have been developed to assess dietary intake. Each has distinct features as well as strengths and limitations. The Dietary Assessment Primer:

- **describes the major types of instruments** that rely on individuals reporting their own diets;
- **provides guidance on using the instruments** alone or in combination to address different research questions;
- **compares key features** of the main self-report dietary assessment instruments;
- **explains and provides guidance regarding validity, measurement error, and calibration** in the context of dietary assessment;
- **provides expanded information about particular key topics** in dietary assessment; and
- **includes a Glossary** of key terms and an extensive list of **References and Resources**.

The Dietary Assessment Primer is located at <http://dietassessmentprimer.cancer.gov>. The NCI scientific leads for this important new resource are Susan Krebs-Smith, PhD, RD; Amy Subar, PhD, MPH, RD; Jill Reedy, PhD, MPH, RD; Fran Thompson, PhD, MPH; and TusaRebecca Schap, PhD, MPH, RD, all in the NCI Applied Research Program’s Risk Factor Monitoring and Methods Branch (RFMMB); Anne Brown Rodgers, science writer; and Sharon Kirkpatrick, PhD, MHSc, RD, formerly in the RFMMB and currently assistant professor at the University of Waterloo School of Public Health and Health Systems.

ERRATUM

In “Position of the Academy of Nutrition and Dietetics: Micronutrient Supplementation” in the November 2018 issue of the *Journal*, page 2167 reads, “For vitamin E, consumption of about 50% more units of synthetic alpha tocopherol from dietary supplements and fortified foods are needed to obtain the same amount of the vitamin as from the natural form (*dl*-alpha tocopherol).” For greater clarity, the text should read, “For vitamin E, consumption of about 50% more units of synthetic alpha tocopherol (*dl*-alpha tocopherol) from dietary supplements and fortified foods are needed to obtain the same amount of the vitamin as from the natural form (*d*-alpha tocopherol).” The authors regret this error.
